

An Investigation of the Phase Behavior of SDS in water using NG3 SANS

Group II – 2012 NCNR Summer School

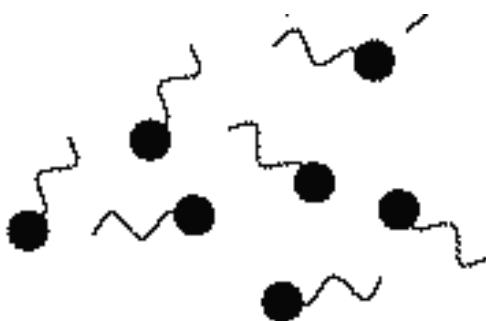

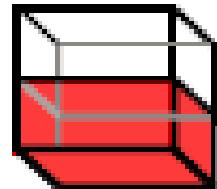

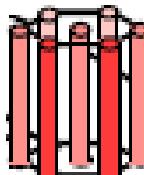

Kiyo Akabori, Greg Barnett, Kiersten
Batzli, Vishal Javvaji, Ricky Lam, Halil
Oztop, Jessie Sun, Charlezetta Wilson

Objectives

- Hands on experience using Small angle neutron scattering (SANS) @ NG3
- Determine the shape and size of Sodium dodecyl sulfate (SDS) micelles
- Determine the effects of temperature and concentration on the phase behavior of SDS

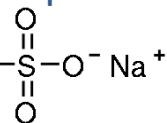

SDS Phase Diagram

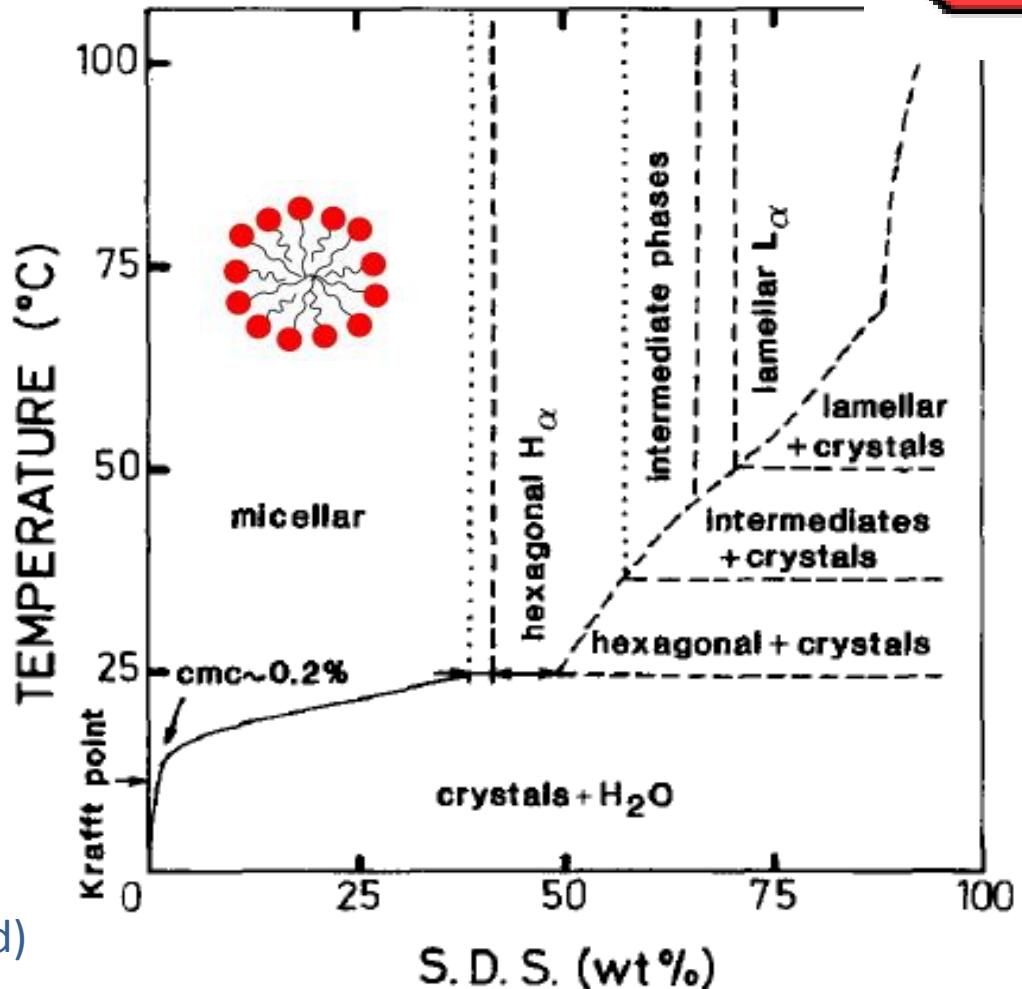

Surfactant

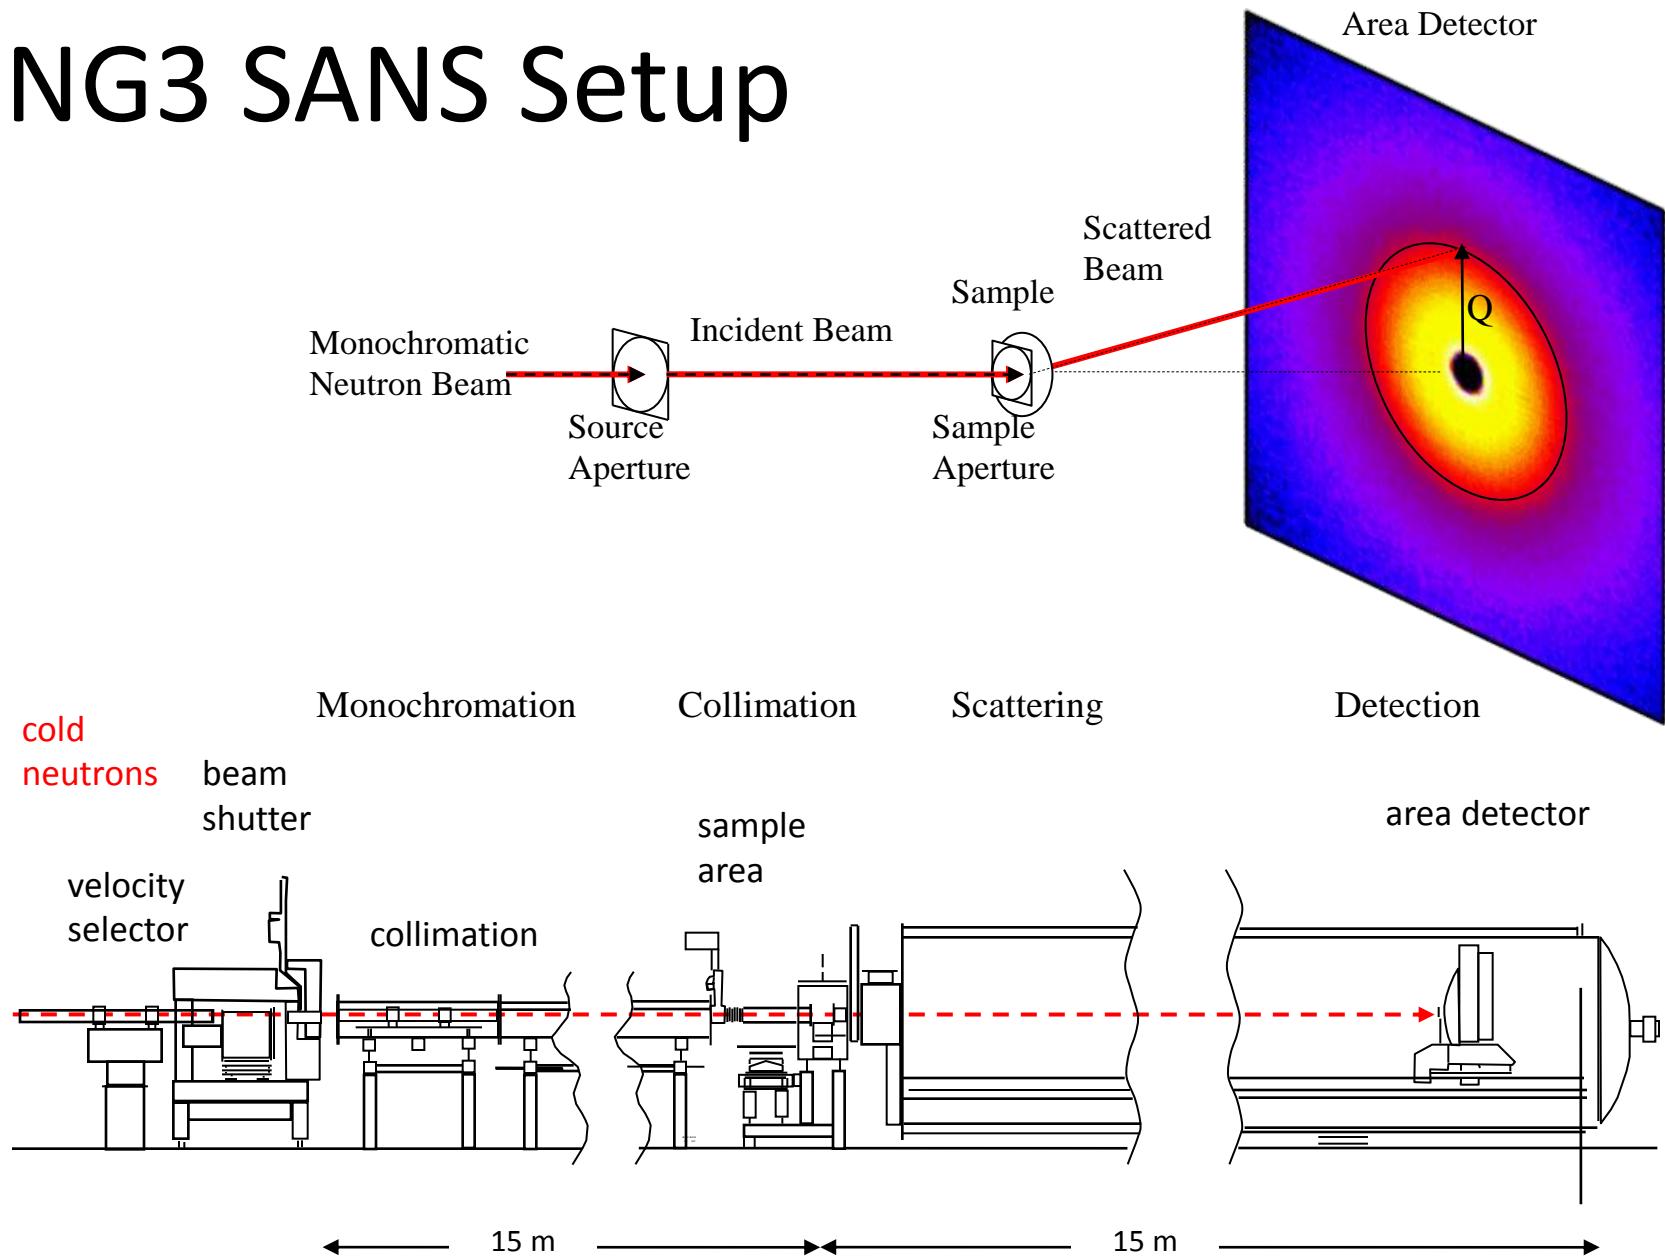

(Hydrophilic Head)

(Hydrophobic Tail)

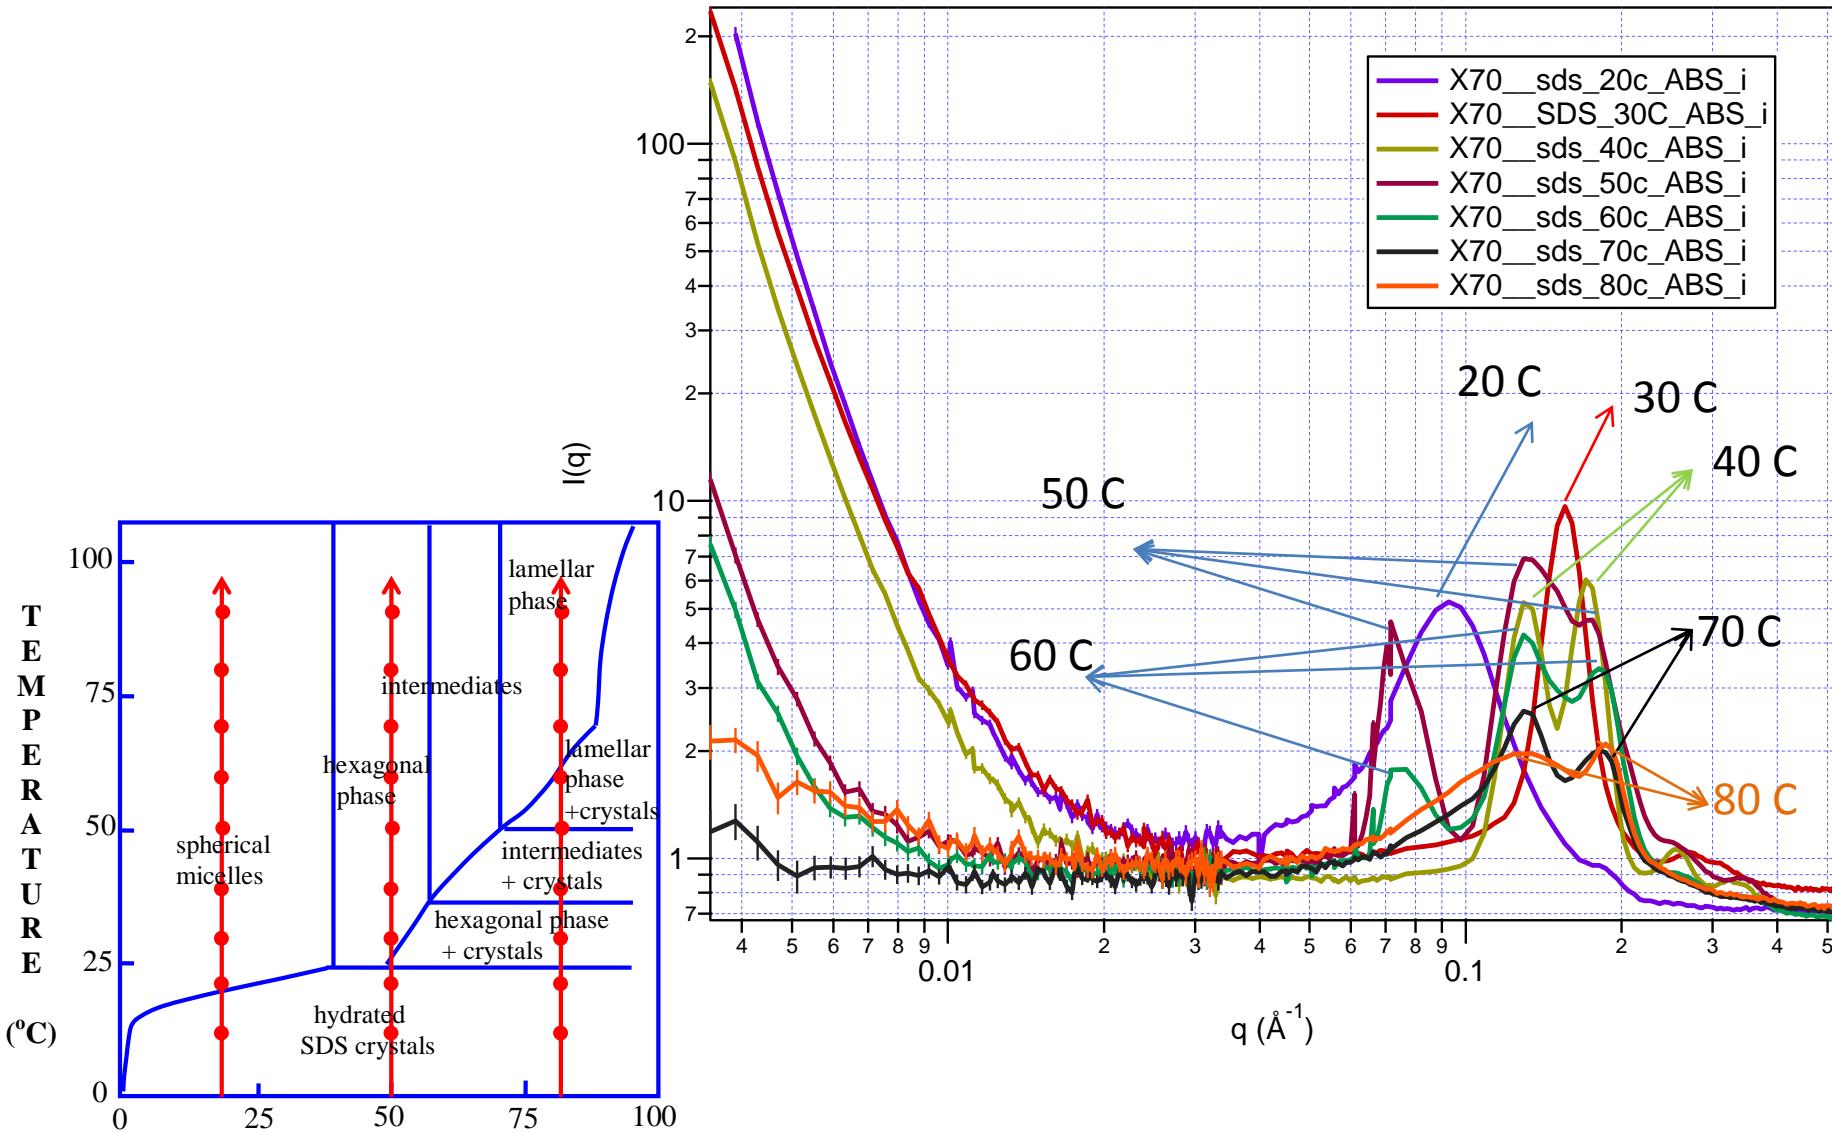

NG3 SANS Setup

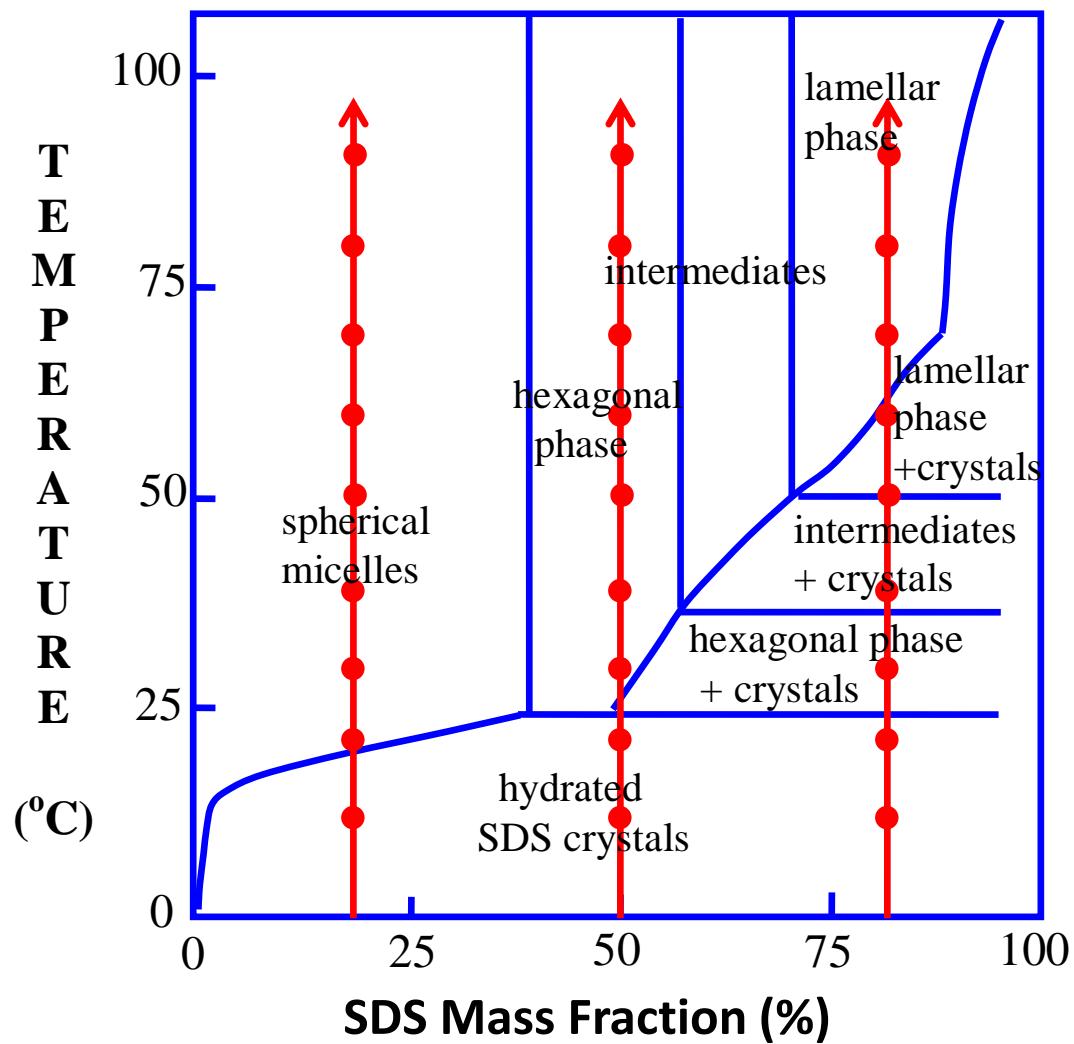

Experimental Design

- SDS micelles were prepared
 - 10wt% to 80wt% in 10wt% increments
- SANS measurements were performed
 - 10°C to 80°C in 10° increments
- Data was analyzed using IGOR
 - NCNR Analysis Macros

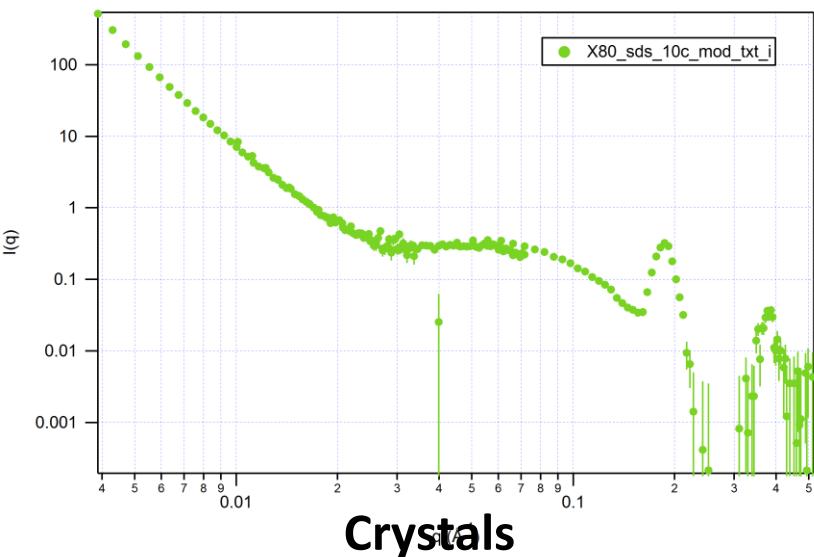

70% SDS Phase Structures

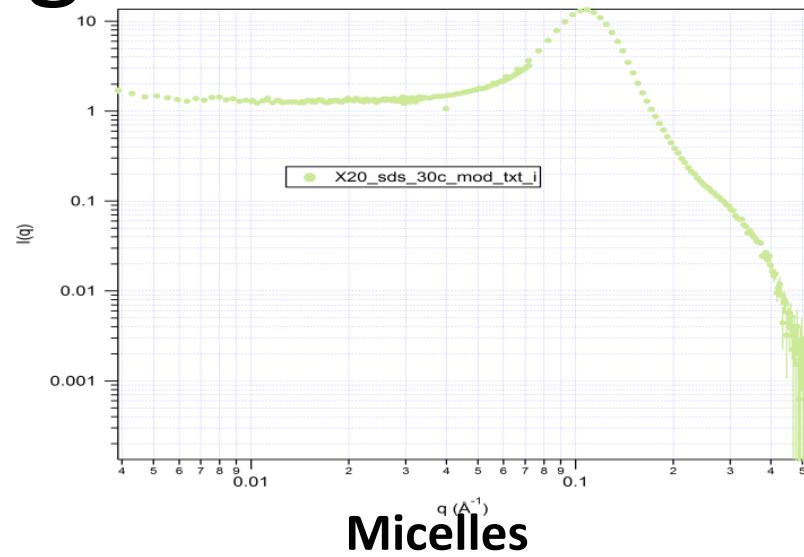

Old Diagram

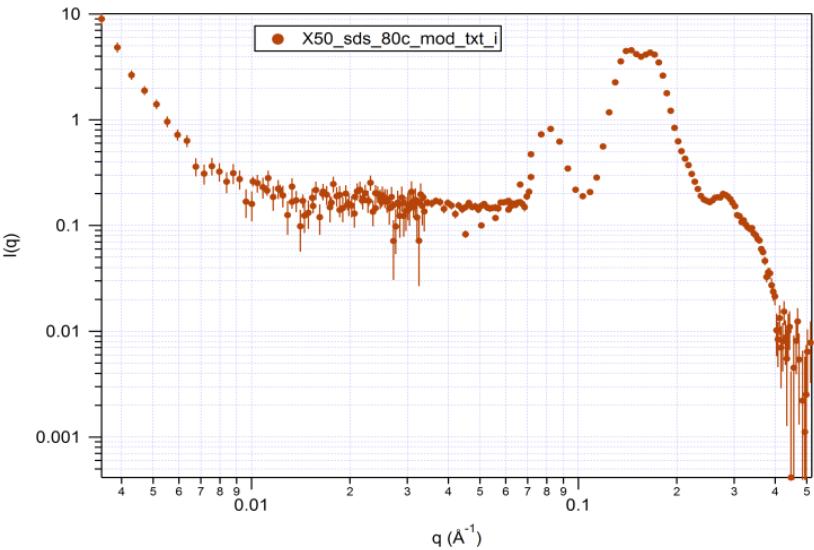

Indexing Peaks

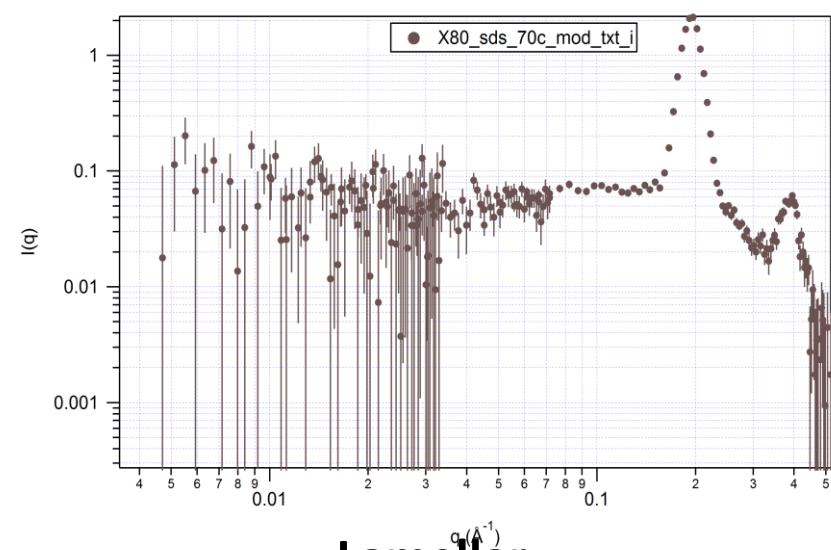

Crystals

Micelles

Hexagonal

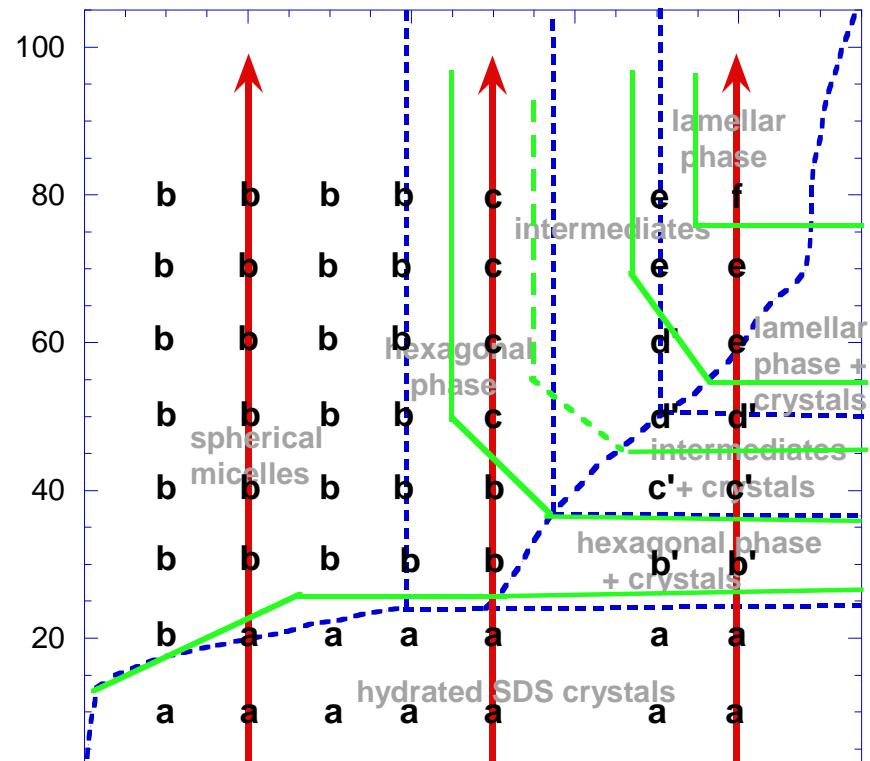

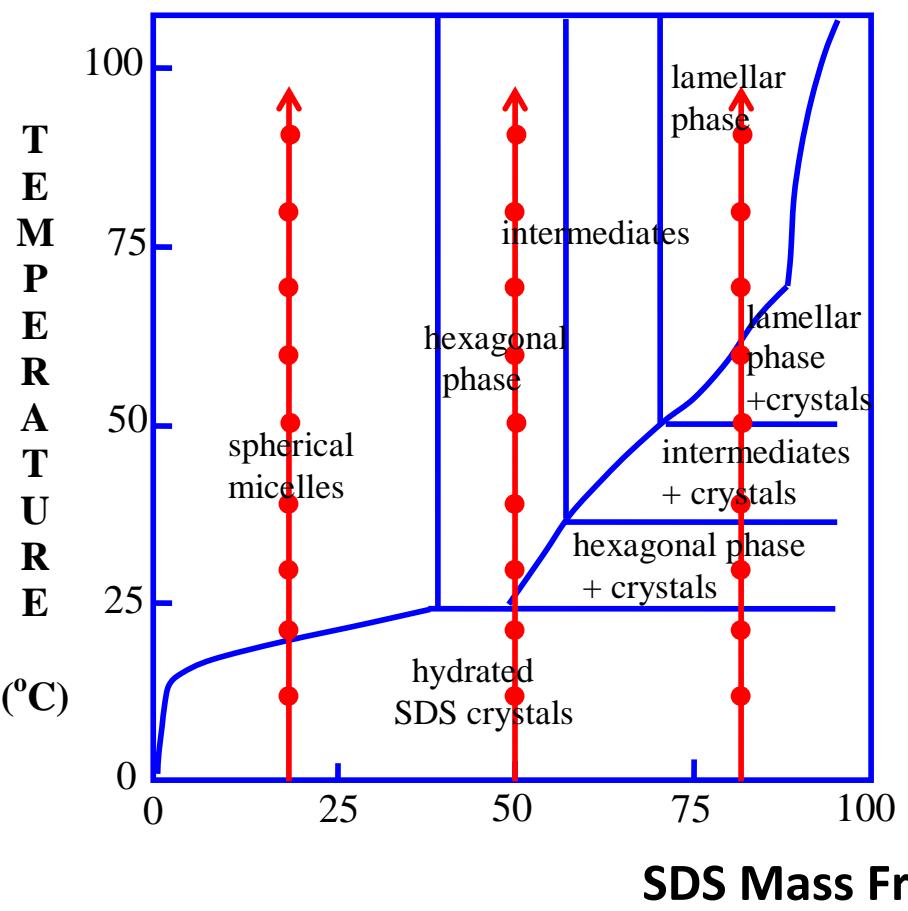

Lamellar

Indexing Peaks

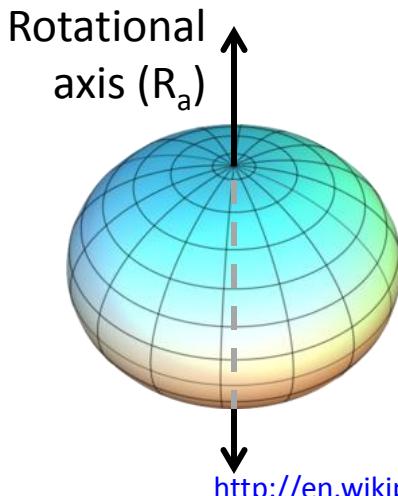

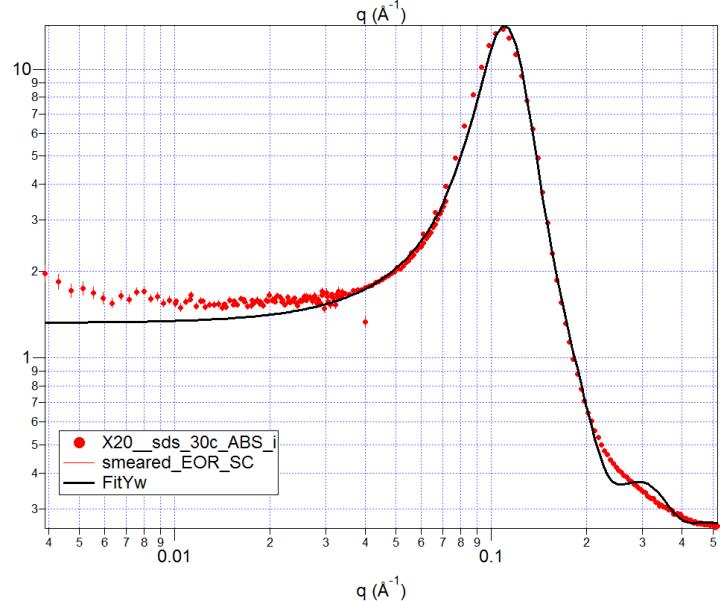

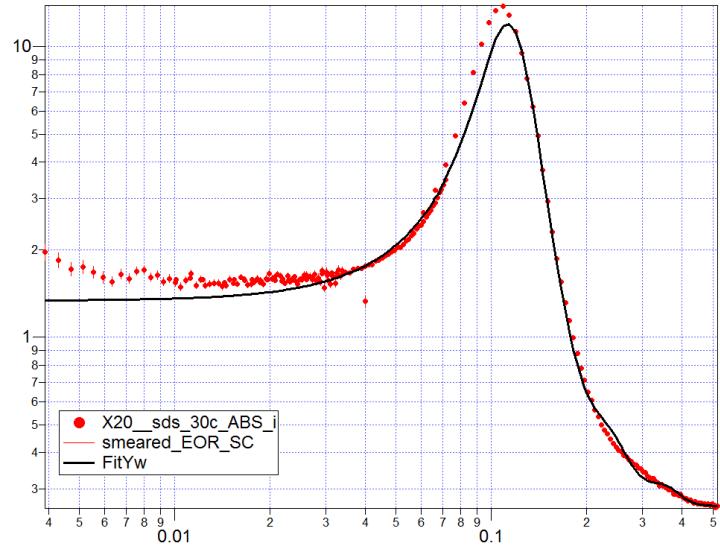

- Structural info
 - Lamellar ($1, \sqrt{4}$)
 - Hexagonal ($1, \sqrt{3}, \sqrt{4}, \sqrt{9}, \sqrt{12}, \dots$)
 - Crystals
- Updating phase diagram accordingly
- Or a combination of structures

Old vs New Phase Diagram

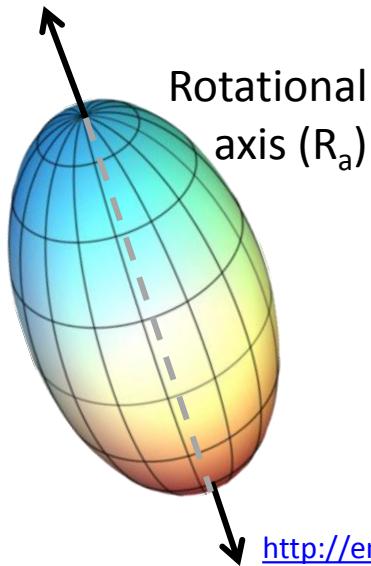

Prolate vs Oblate

Smeared ellipsoid model fit

Oblate
 $R_a = 15.1 \text{ \AA}$
 $R_b = 26.2 \text{ \AA}$

$$\chi^2 = 6.58$$

Prolate
 $R_a = 36.4 \text{ \AA}$
 $R_b = 17.7 \text{ \AA}$

$$\chi^2 = 7.52$$

Radius vs. Temperature

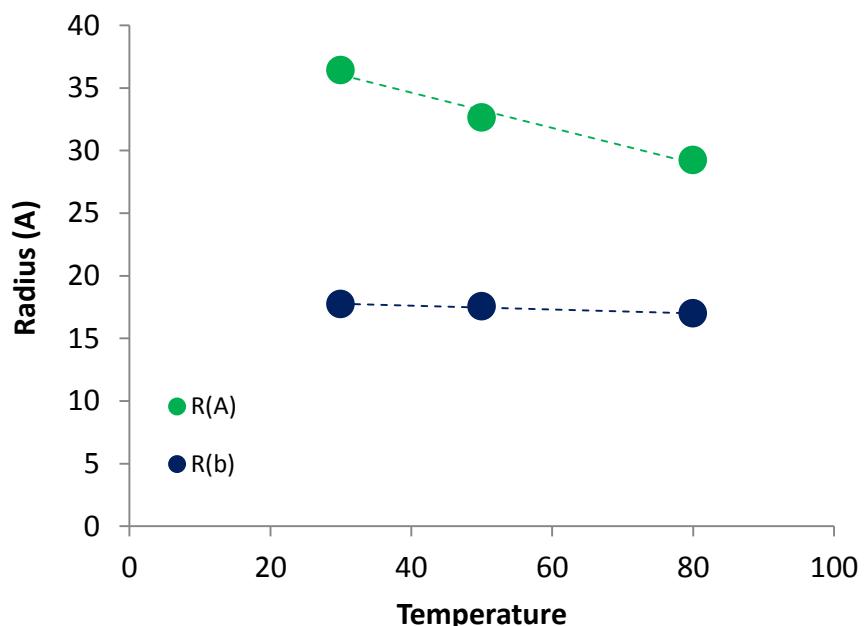

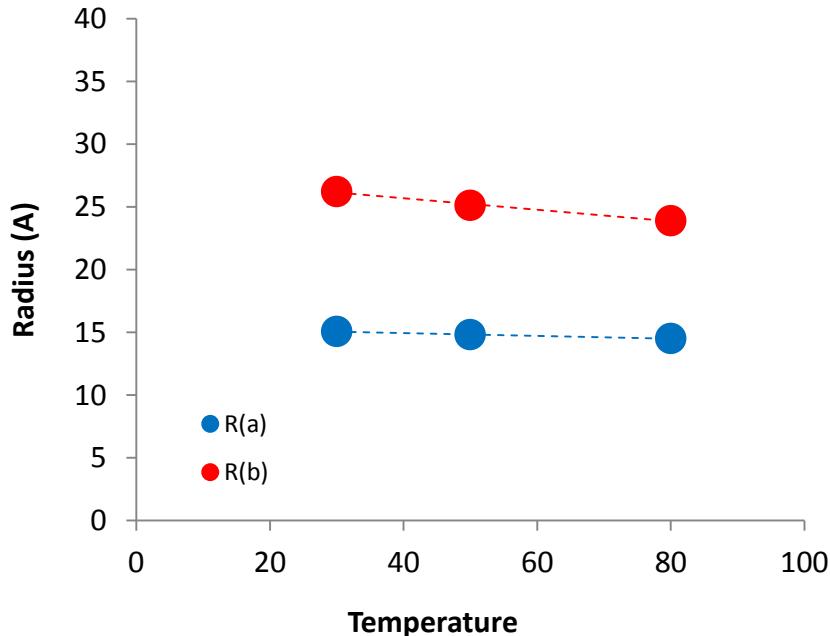

Oblate model (20% mass fraction)

Temp (C)	R _a (Å)	R _b (Å)	X ²
30	15.0739	26.2076	6.57489
50	14.8203	25.1155	5.40358
80	14.5007	23.8827	3.61079

Prolate model (20% mass fraction)

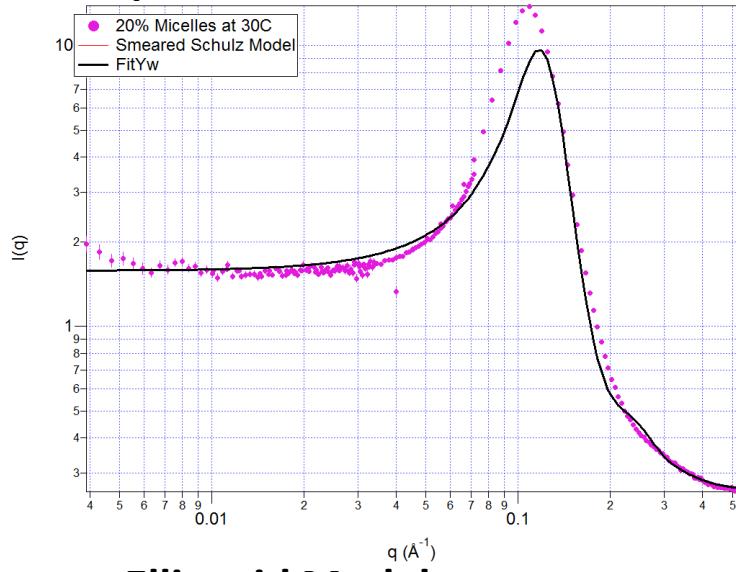

Temp (C)	R _a (Å)	R _b (Å)	X ²
30	36.3985	17.733	7.51724
50	32.6245	17.5374	7.09351
80	29.2232	16.9808	4.76725

Increasing Temperature = Decreasing Size (both R_a and R_b)

The Great Prolate Oblate State Debate!!

Old vs New Phase Diagram

Summary

- **Learned to use SANS to determine structure!!**

SDS Micelle Project

- Re-evaluated Phase Diagram
- Prolate vs Oblate?
- Indexed Peaks for micelle structure
- Further Work for Phase Diagram
