

# 2016

**NCNR Update**

July 12, 2016

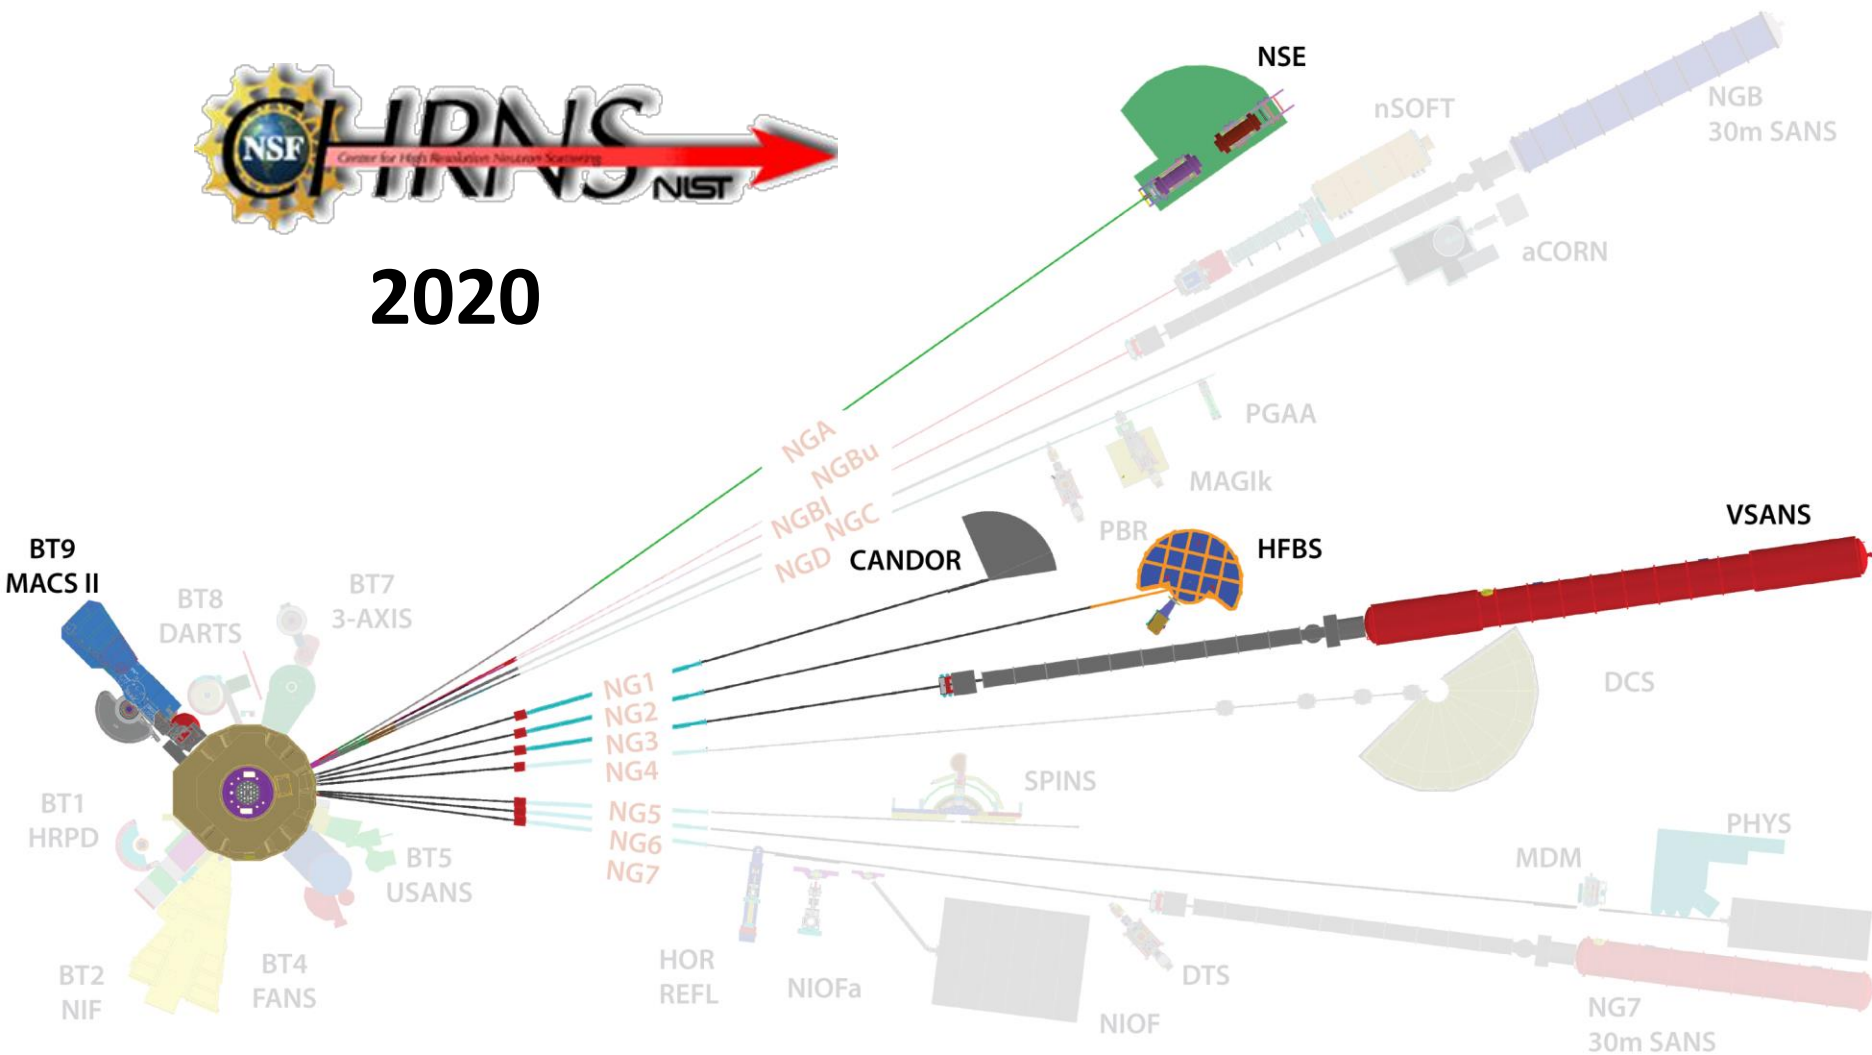

2016

2020

# VSANS

## Data collection rate

$\sim 10\times$  SANS &  $\sim 300\times$  uSANS

## Extended Q-range

$2\times 10^{-4} - 1 \text{ \AA}^{-1}$

## Flexibility

2%/13.5%/30%  
wavelength bands

Expect vSANS to be  
included in the first call  
for proposals in 2017

# **VSANS**

## **SCHEDULE**

### **First neutrons on detector: January 2017**

Delivery and fit-out of detector vessel

Install/testing of detector carriages

Install/testing of 8 detector panels

### **First SANS experiment: March 2017**

Sample area installed

*Basic* data acquisition software tested

Tube detector NISTO software tested

*Basic* data reduction software tested

### **Full polarized beam operation: May 2017**

Polarizer installed

RF flipper installed

Guide fields installed

NICE software polarized beam option tested

Data reduction software for polarized beam tested

**vSANS will impact DCS schedule**

# **VSANS**

## **SCHEDULE**

### **Kinetic SANS: May 2017**

Event mode data output (software) from tube detectors (built/tested)

Event mode option in NICE software (built/tested)

Event mode data reduction in IGOR software (built/tested)

### **Very small Q: High resolution mode: October 2017**

Install/test high resolution detector

Build/install rear carriage

New NISTO software to handle the detector

New NICE software to handle the detector

Data reduction software to handle new detector histogram

Procure/install chiller for  $\text{MgF}_2$  prisms and lenses

Build/install/align converging beam apertures

### **Graphite monochromator: October 2017**

Procure/deliver HOPG

Install graphite

# CANDoR

White beam reflectometer

$$\begin{array}{ccc} \mathbf{30} & \times & \mathbf{54} = \mathbf{1620} \\ \text{channels} & & \text{dets/array} \quad \text{total detectors} \end{array}$$

0.3 nm  $\rightarrow$  10  $\mu$ m

$$\delta Q/Q \approx 0.025$$

$$\delta \lambda / \lambda \approx 0.015$$

**Expect CANDoR to be included in the call for proposals around end of CY2017**

Final optimization & testing of prototype detector modules will be completed

# CANDoR

## Schedule

### **First neutrons on detector: September 2017**

Scintillator detector production/repeatability

Data acquisition electronics

Installation/testing of detector

### **First specular reflection experiment: December 2017**

Sample area installed

Basic NICE software features tested

Basic data reduction software (built/tested)

### **Full polarized beam operation: March 2018**

Polarizer installed

RF flipper installed

In-situ  $^3\text{He}$  polarization analysis (built/tested/installed)

### **Non-specular capability available: June 2018**

Data reduction software (built/tested)

### **Event mode available: August 2018**

Event mode option in NICE software (built/tested)

Event mode data reduction software (built/tested)

# Neutron Spin-Echo

Measured performance > any NSE except IN15: 10 ps to >300 ns

# Neutron Spin-Echo

The effect of branching on solution dynamics in polymer-like micelles

*Michelle Calabrese and Norm Wagner*

# Cold Neutron Imaging

*inside the "cave"*

# Neutron Measurements for Materials Design & Characterization

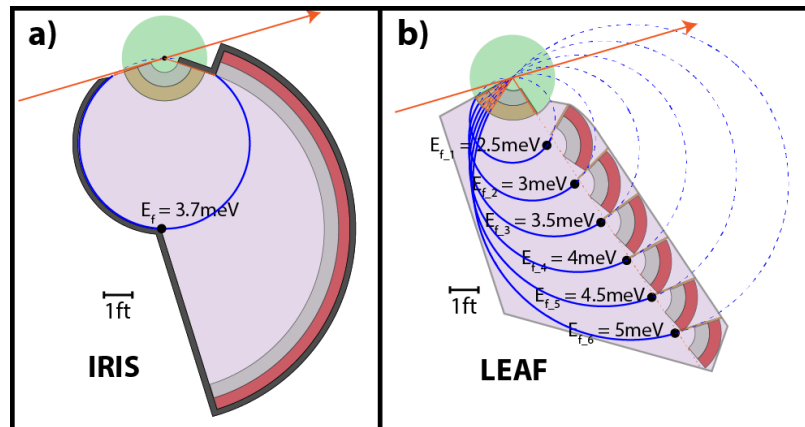

August 21-22, 2014 | Bolger Center | Potomac, MD

# Neutron Measurements for Materials Design & Characterization

**NSE:** More cooling power  $\rightarrow$  higher current  $\rightarrow$  longer Fourier times

**HFBS:** Improved converging guide & larger monochromator  $\rightarrow \times 2.4$

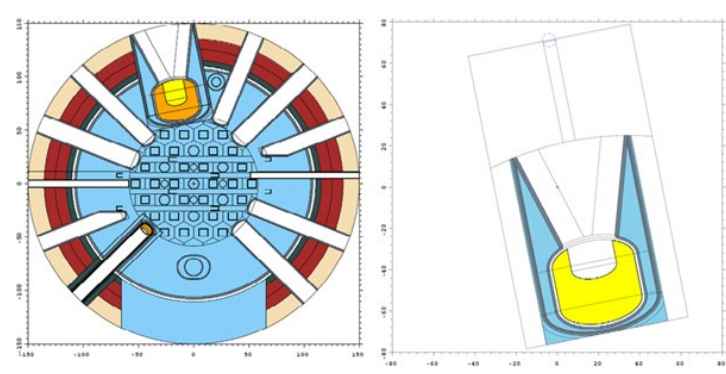

**COLD TAS:** Conceptual design exploration

**Thermal Powder Diffractometer:** Conceptual design exploration

# D<sub>2</sub> Cold Source

NNSA-GTRI partnership to mitigate performance losses due to HEU-to-LEU conversion

35 liter liquid D<sub>2</sub> cold source (requiring 7 kW refrigerator)

All refrigerator parts received  
NCNR performing system integration

NNSA providing funding to complete CS

Projected 2022 installation

# LEU-Based Replacement Reactor

Preliminary study for LEU replacement reactor for cold neutron production

The mid-plane of the split core reactor. **Two** cold neutron source (CNS) are placed in the north and south side of the core, and **four** thermal beam tubes are located in the east and west side of the core **at different elevations**.

The core consists of total **18** fuel elements which are evenly distributed into **two** horizontal split regions.

| Properties               | NBSR-2       | NBSR        |
|--------------------------|--------------|-------------|
| Reactor power (MW)       | 20 - 30      | 20          |
| Fuel cycle length (days) | 30           | 38.5        |
| Fuel material            | $U_3Si_2/Al$ | $U_3O_8/Al$ |
| Fuel enrichment (%)      | 19.75        | 93          |

# Neutron Performance for the NIST Replacement Reactor

Maximum thermal flux at the reflector:  
 **$5 \times 10^{14}$  n/cm<sup>2</sup>-s.**

| Reactor | Country   | Power (MW <sub>th</sub> ) | Fuel | Quality factor* |
|---------|-----------|---------------------------|------|-----------------|
| NBSR    | U.S.      | 20                        | HEU  | 2.0             |
| HFIR    | U.S.      | 85                        | HEU  | 1.2             |
| BR-2    | Belgium   | 60                        | LEU  | 2.0             |
| OPAL    | Australia | 20                        | LEU  | 1.5             |
| CARR    | China     | 60                        | LEU  | 1.3             |
| NBSR-2  | U.S.      | 20                        | LEU  | 2.5             |

*\*Defined as the maximum thermal flux divided by the thermal power ( $\times 10^{13}$  MTF/MW<sub>th</sub>).*

# NCNR USER SURVEY

Evaluation difference: 2015 - 2011

# NCNR USER SURVEY

“

## Proposal process

*It is a much easier and more straightforward process than beam time at other labs and the reviews are typically more fair.*

*Ability to submit as PDF a big improvement*

## Health Physics

*We're lucky to have such a good staff of HP's.*

*HP training very insightful and I felt well prepared for all possible situations.*

*The updated training process is a HUGE improvement.*

## Support facilities

*The lab supplies available ensure that experiments will not fail due to lack of availability of any supplies.*

*They have been very good for decades.*

*Facilities are well-equipped.*

*The facilities are excellent.*

## Sample environments

*One of the best among all synchrotron and nuclear reactor facilities over the country.*

## Instrument-specific

*William and Julie are most excellent. They are amongst the most hard working and strong scientists I have met.*

*The BT-2 scientists have been fantastic to work with.*

*The new NICE software is fantastic.*

*Used MACS only once, but WOW...*

## Data Analysis & Viz

*SANS control/reduction/analysis capabilities remain at cutting edge.*

*DAVE is great. MSlice for MACS is excellent and supported very well.*

*Ref1d is a significant advance, and keeps getting better.*

”

# NCNR USER SURVEY

## Proposal process

*System for inputting materials/samples is very cumbersome.*

*...had problems logging on NIST computers from outside of the U.S.*

## Health Physics

*I think the computer based training could be shorter and tailored to the user's needs.*

*The amount of material is pretty overwhelming for first-time users, so I think it's important for the local contact to reiterate what information is important for each specific experiment.*

## Support facilities

*X-ray Laue Machine is highly demanded.*

*Desks in user office are usually fully reserved*

*A vending machine with healthy options and even full hot meals should be considered.*

## Sample environments

*$^3\text{He}$  system has been problematic.*

*Need to document data reduction/correction scheme for more advanced sample environments such as 1-2 and 1-3 plane rheo-SANS.*

## Instrument-specific

*BT7 data acquisition software causes far too much (~35 seconds/point) overhead between data points.*

*MAGIK could use some more good slits. The software is not easy to use.*

## Data Analysis & Viz

*Software has too many features, confusing for those who don't use it all the time.*

*data processing of time resolved data could be much improved, multiple file addition especially with time resolved data needs improvement.*

# NCNR RESPONSE TO USER SURVEY

---

## Proposal process

*We are placing an optional suggested reviewer box on the proposal form (Fall 2016)*

*Scientists submitting a proposal are encouraged to discuss the experiment with an appropriate instrument scientist.*

---

## Health Physics

*New web-based training implemented in 2013*

*Training undergoing review for redundancies and unnecessary content*

---

## User Amenities

*We received permission to text passwords for the visitor's network upon request*

*We expect SKYPE to be allowed sometime in 2017*

*3 additional wi-fi access points have been installed*

---

## Support facilities

*A lab is being built in the NW corner of the guide hall-available early 2017*

*X-ray Laue machine is now available in the guide hall*

*A test station with monochromatic beam (4.1 Å) has been installed in the guide hall.*

---

## Sample environments

*We have developed a new extensional flow cell for SANS that can be easily reconfigured to create a variety of flow fields and we are actively working to create  $\mu$ flow devices*

*We have procured a 3T SC magnet for reflectometry (delivery summer of 2016)*

*AC magnet for SANS that can produce a field with a sinusoidal waveform ordered (delivery summer of 2016)*

---

## Instrument control SW

*NICE currently running on 8 instruments*

*NICE will be the DAQ SW for vSANS and CANDoR and then MACS and BT7 (late 2018-2019)*

*NICE supports time-stamping data and reduction and visualization is still a work-in-progress*

---

## Data Analysis & Viz

*Reduction & viz for vSANS and CANDoR are the current priorities*

*We are actively working with the international neutron scattering community on the on-going development of SASView*

*We are collaborating with the international NSF/EPSCRC project, CCP-SAS which calculates scattering density directly from atomistic models*

*Thank You!*
