July 18, 2014

Sodium dodecyl sulfate (SDS)

- SDS: $\text{NaC}_{12}\text{H}_{25}\text{SO}_4$
- Surfactant
- Critical micelle concentration (CMC): 0.2% mass fraction
- Driving force: hydrophobic effect
- Self-assembles into micelles above CMC

Objectives

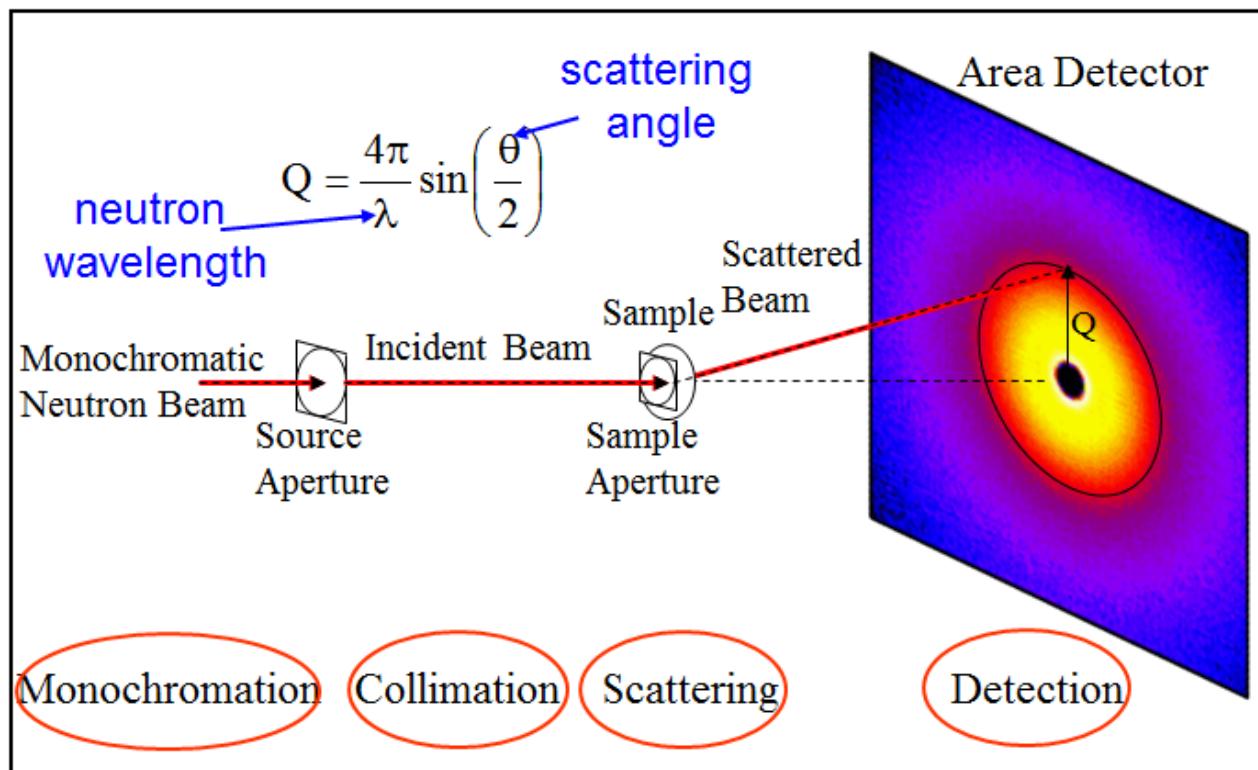

- Use SANS to determine effect of temperature on SDS micellization
 1. Micelle morphology
 2. Temperature effect on micelles size
 3. Temperature effect on micelles charge

Experimental Setup

5% SDS in D₂O: 10 °C~90 °C, step 10 °C

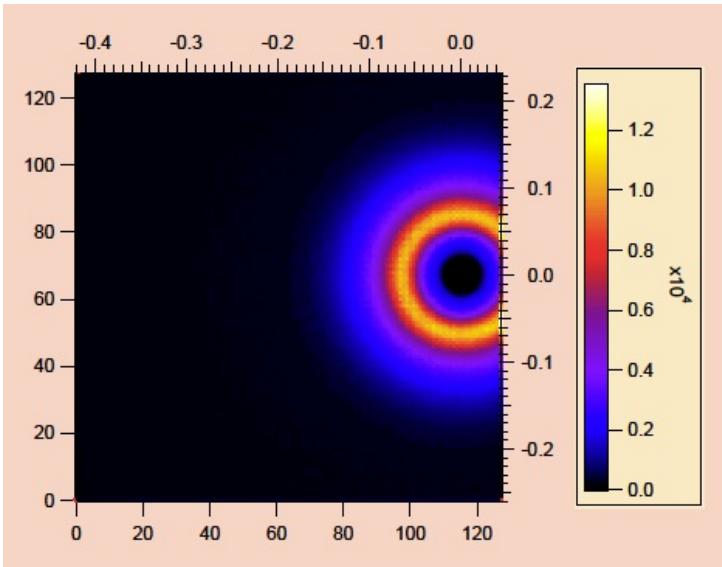

3 configurations: 1m, 4m, 13m

Q-range: 0.004 - 0.4 Å⁻¹

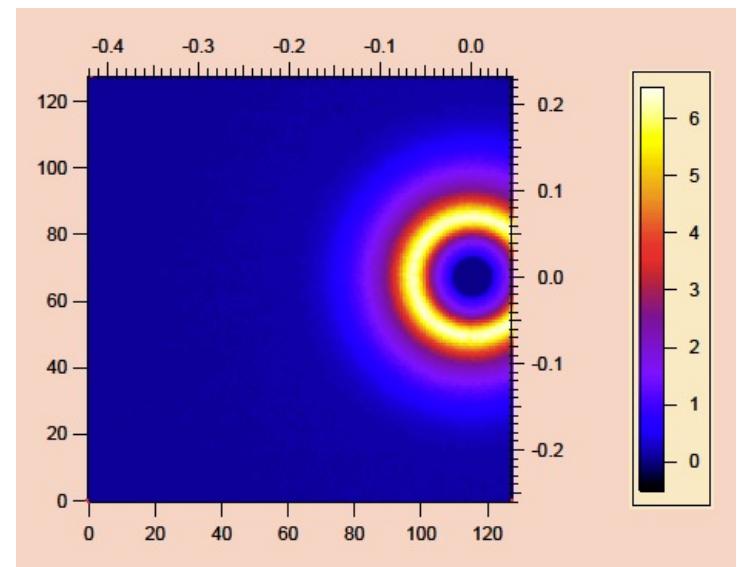

Data Reduction

$$\frac{\partial \Sigma}{\partial \Omega}(q) = A[I_{\text{sample}}(q) - I_{\text{background}} - \frac{T_{\text{sample}}}{T_{\text{empty}}} [I_{\text{empty}} - I_{\text{background}}]]$$

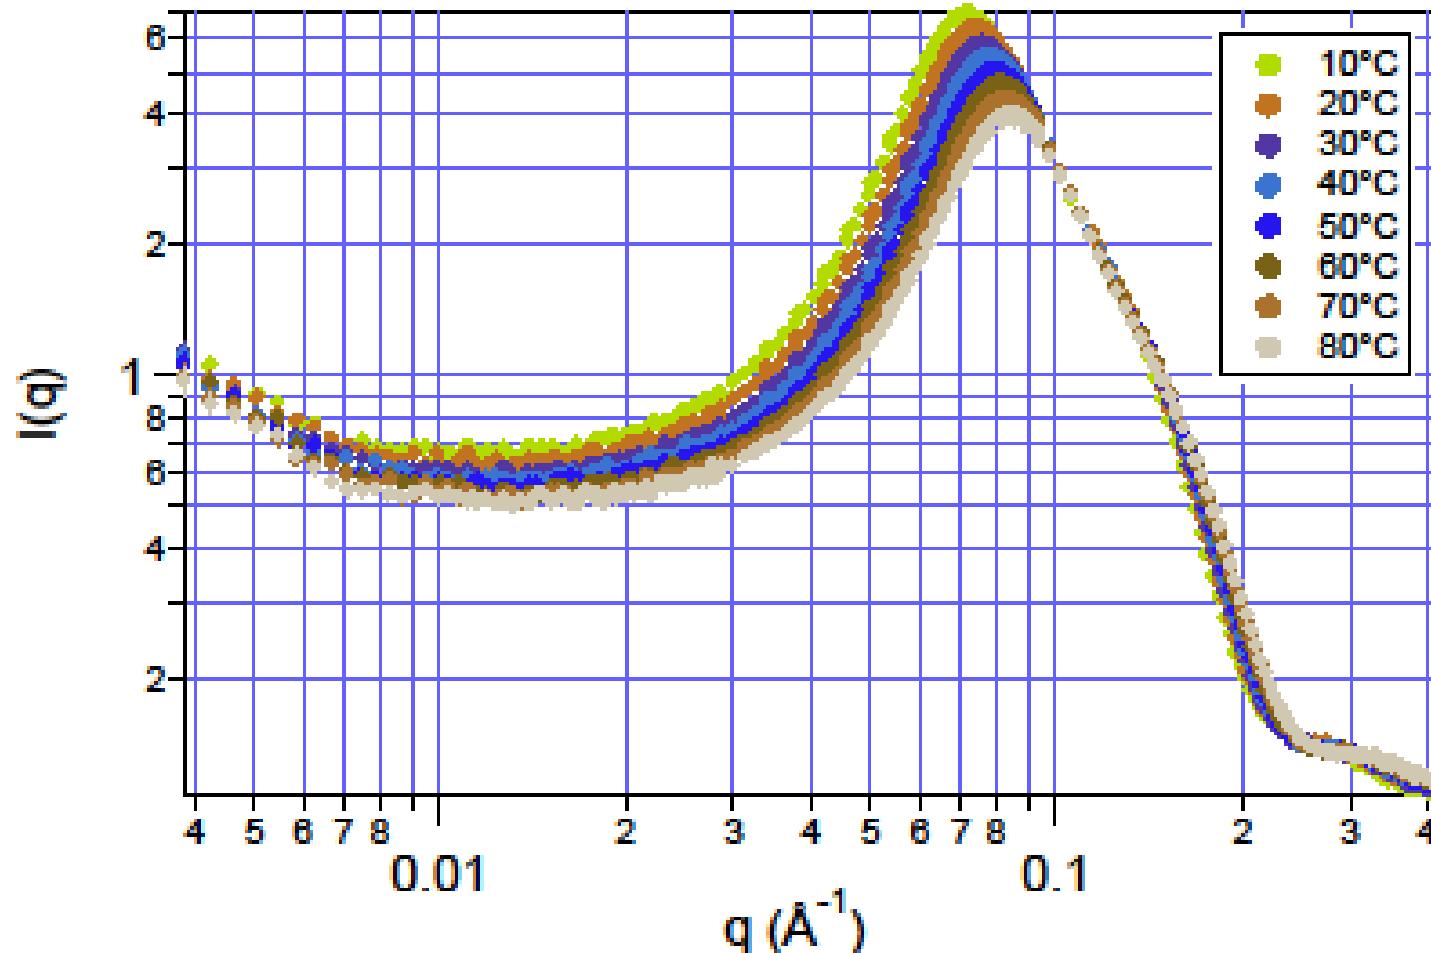

Raw data

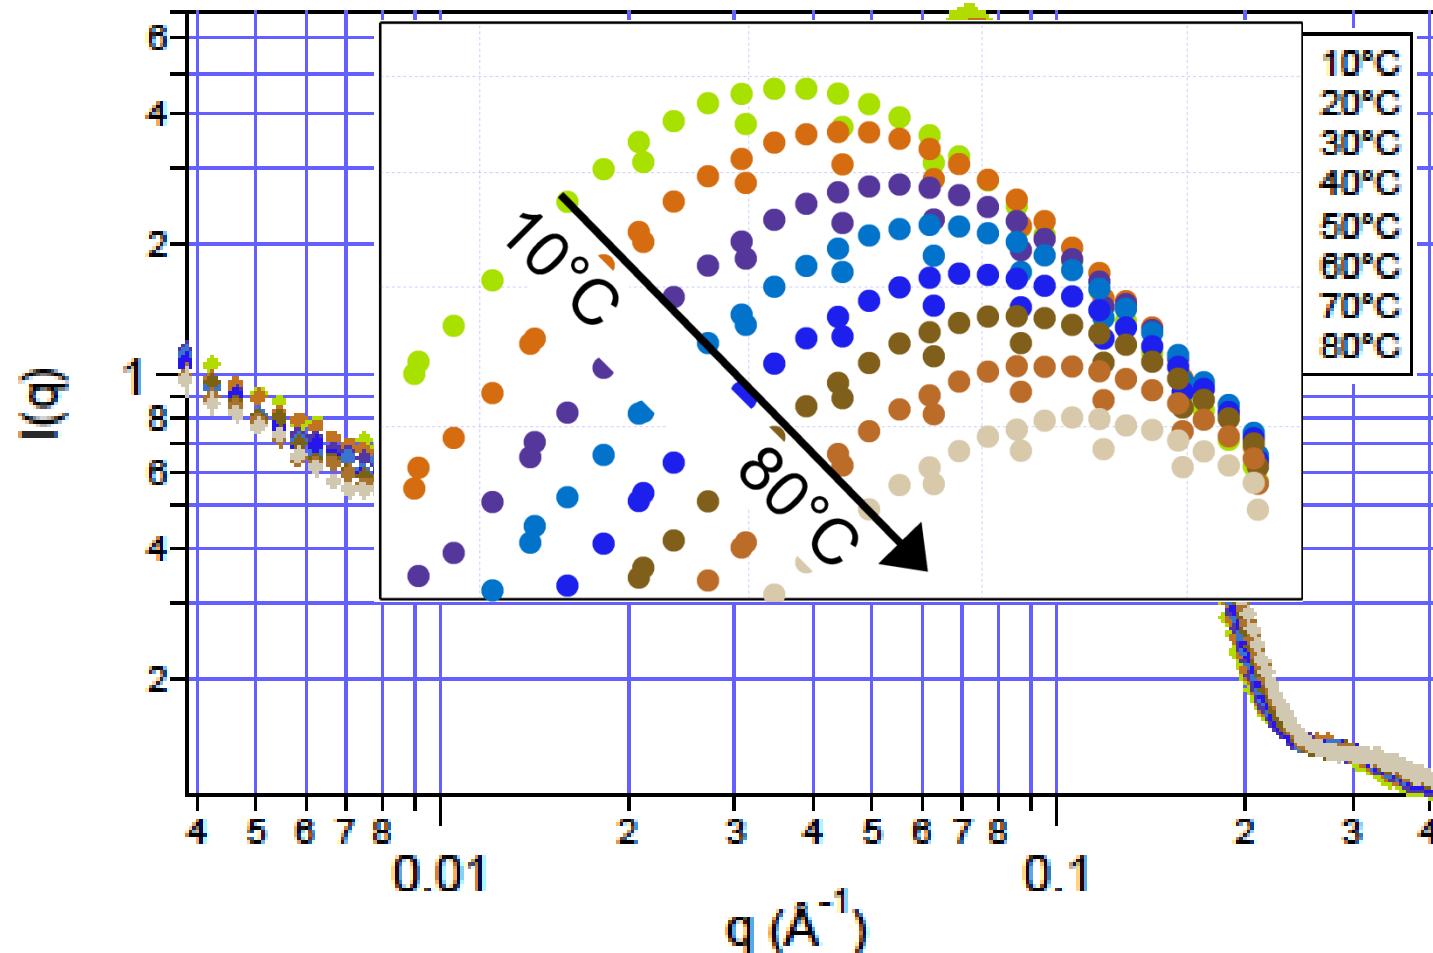

Reduced data

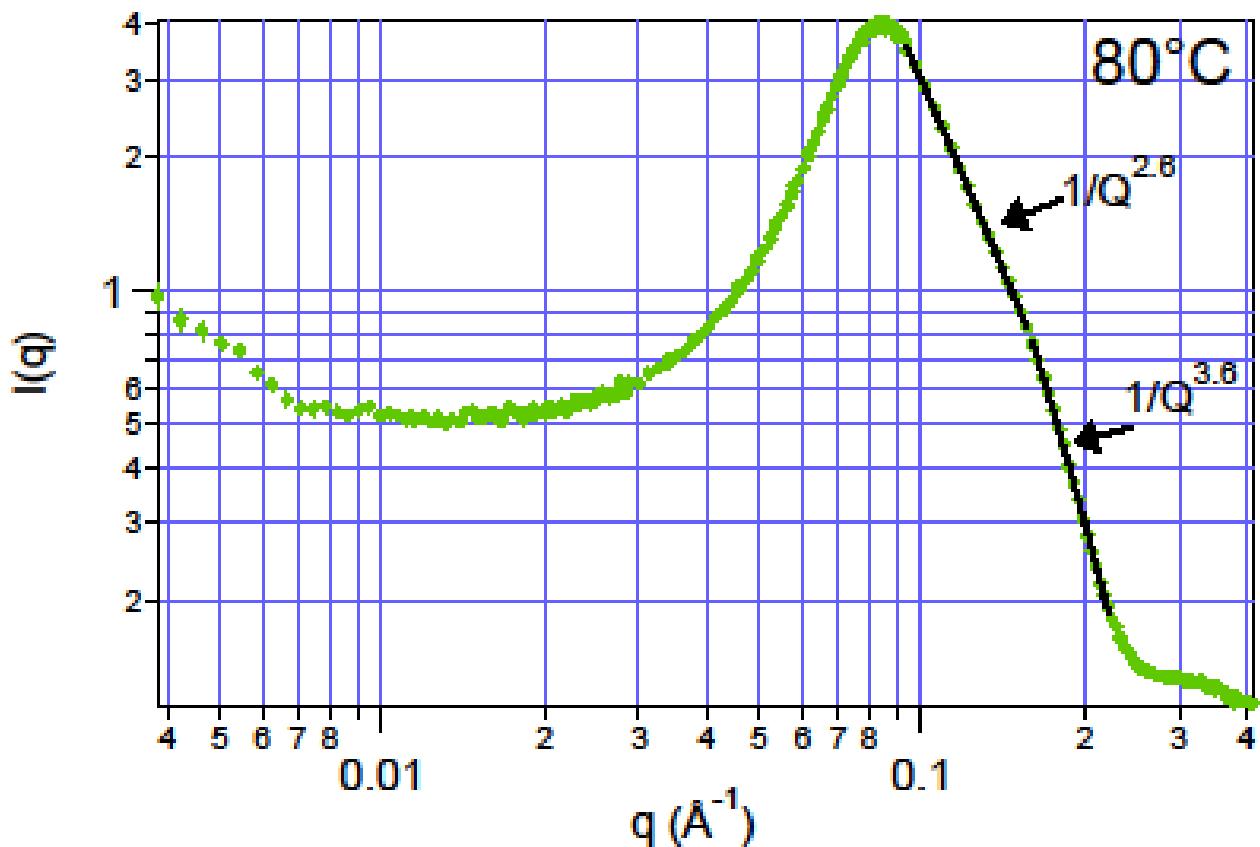

SANS from SDS Micelles

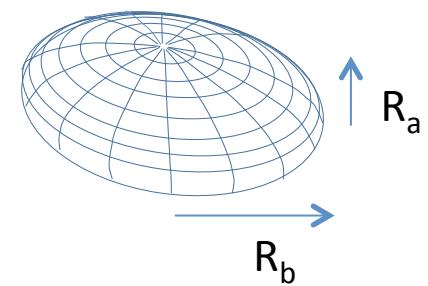

SANS from SDS Micelles

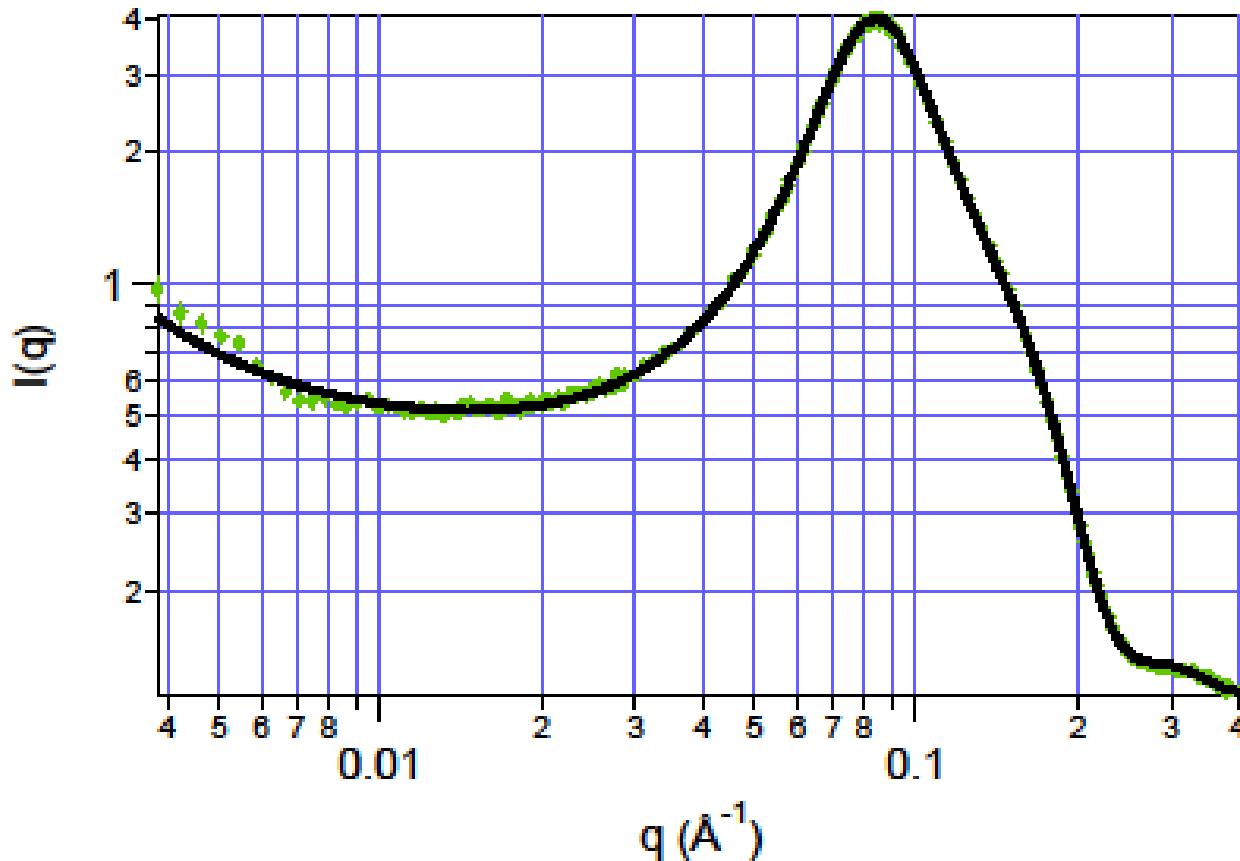

SANS from SDS Micelles

Ellipsoid

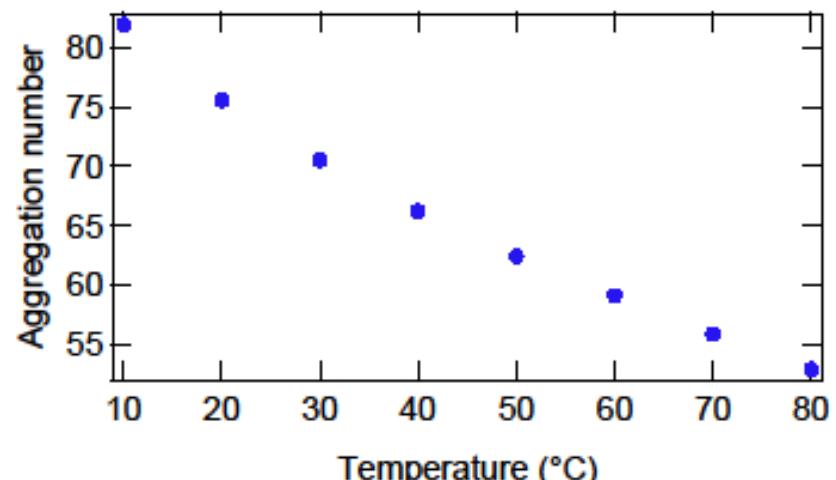

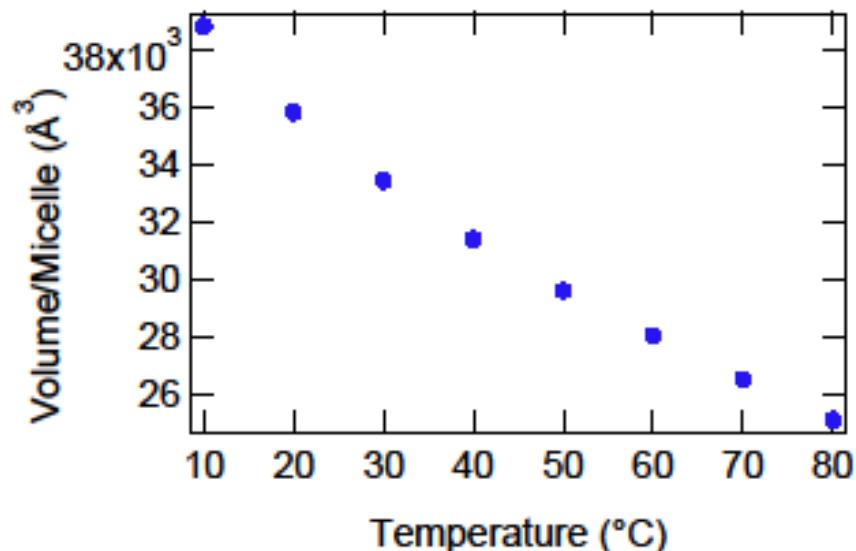

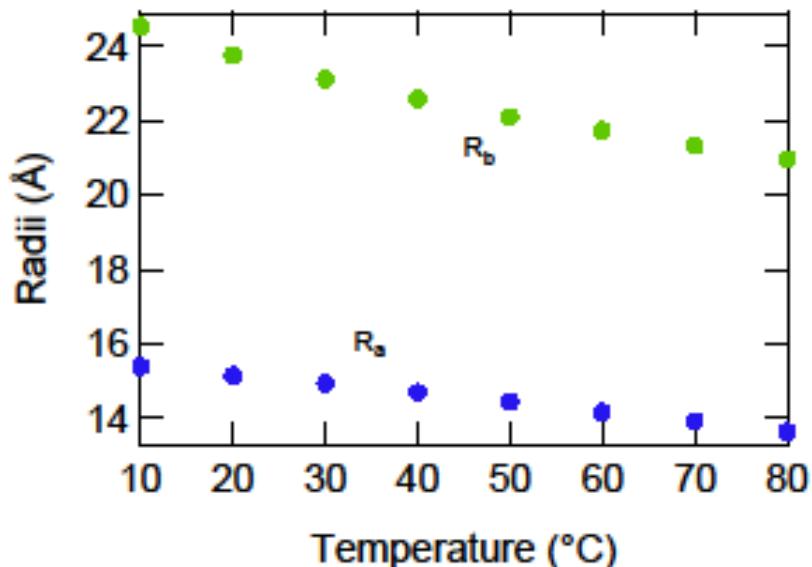

Uniform Ellipsoid with S(Q)

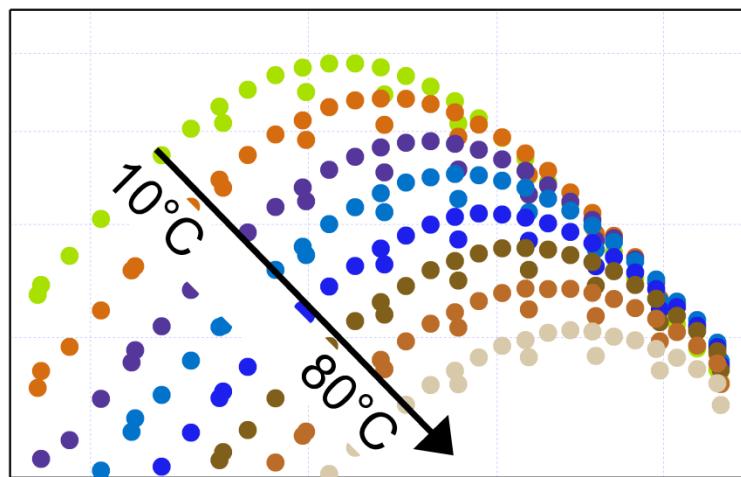

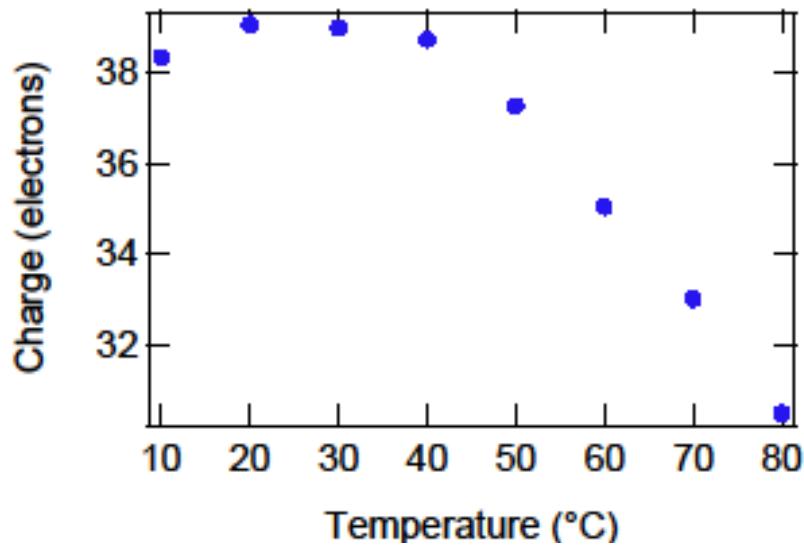

$$\frac{\partial \Sigma}{\partial \Omega}(q) = \left(\int \phi (\Delta \rho)^2 V_{\text{particle}} \left(\frac{3j_1(q\mu R_e)}{qR_e} \right)^2 S(q) d\mu \right) + \frac{A}{q^n} + Bkgd$$

Micelle size decreases with temperature

Charge decreases with temperature

Conclusions

- Micelle structure: ellipsoidal
- Ellipsoid size decreases with increasing temperature
- Micelle charge decreases with increasing temperature
